

LAB ASSIGNMENT-3.1

NAME : KOLA SNEHA

ROLL NO : 2403A510F4

BATCH : 06

BRANCH : CSE

The code defines a function calculate mobile bill to compute mobile data charges, including base rates, additional services, and tax.

Dictionaries are used to store the costs for different plan types and additional services.

The function calculates data charges, value-added service charges, subtotal, tax, and the total bill amount.

The code then prompts the user for data usage, plan type, and additional services.

Finally, it calculates the bill using the function and displays the detailed breakdown of the charges.

write a python code for Mobile Data Usage Billing Application that include user should give data consumed, Plan Type (Prepaid / Postpaid)

Additional Services Used (e.g., caller tune, OTT subscription, etc.), and calculate the bill based on charges based on data consumption

VC (Value-added Charges) – charges for additional services

Tax – applicable tax on the total and we have to get
